ABSTRACT OF THE DISCLOSURE

In a thin film magnet and a production process thereof, the thin film magnet has a microstructure composed of crystalline phases of a $Nd_2Fe_{14}B$ structure type, whose c-axis is oriented in the film-thickness direction, and amorphous phases, and each of the Nd₂Fe₁₄B type crystalline phase is isolated from the others by the interposition of This thin film magnet exhibits uniform amorphous phase. flux and less variation in distribution of magnetic characteristics, and hence is of superior quality.
